Educational Field Visit to a Date Processing and Alcohol Production Complex in Biskra

First-year Master's students specializing in Food Industries and Quality Control at the Faculty of Natural and Life Sciences undertook a scientific field visit to a major date processing and alcohol production complex in Biskra.

The visit provided students with practical insights into date processing stages, industrial production techniques, quality control procedures, and applicable industrial standards.

The field trip took place over Wednesday and Thursday under the supervision of Professors Mohamed Didi Ould El Hadj, Mohamed Nadher Kaddar, and Hajar Saifi.

This initiative aims to bridge theoretical knowledge with industrial practice, enhance students' professional skills, and prepare them for careers in the food industry.

Connecting academic learning with real-world industrial experience!
